2013 - 2023
CELEBRATING
10TH ANNIVERSARY

A lowered centre of gravity, easier access to major components and a totally Made in Italy design, these are the key features of Magni brand boom lifts.

Consolidated within the Magni offer, this range is now enriched with new models from 16 to 44 metres and a totally hybrid range equipped with Range Extender. The scissor platform product is also being renewed and improved through the addition of better performing and more durable components.

#THEFUTUREISRED

Scissor lifts

Electric models are exceptionally versatile and easy to manoeuvre in confined spaces with level surfaces, both indoors and outdoors. Low-emission electric pruning shears offer a quiet and comfortable way to work in noise-sensitive environments.

Rough terrain scissor lifts

Our all-terrain scissor lifts offer competitive lifting capacities and large working areas to ensure productivity and safety on any job site. All models are perfect for rough terrain and uneven working areas.

Vertical mast lifts

These platforms are equipped with an electric motor that ensures low noise levels, zero emissions and the ability to work indoors. Their lightweight and compact design makes them ideal for work even in confined spaces.

Articulated Boom lifts

The articulated platforms have a very low centre of gravity, resulting in excellent stability and outstanding lifting performance. Depending on the model, they can fit a diesel engine or an electric motor.

Thanks to their features, all platforms are ideal for construction, refurbishments, and big events such as concerts and shows.

3 different types of engines can be mounted on all our articulated platforms:

DIESEL (D)

ELETTRIC (E)

HYBRID (H)
